Product Design – Design a Digital Temple

Framework	Clarifying Questions
Who	• Who is our **primary target persona** (e.g., the elderly, NRIs missing cultural roots, or millennials seeking quick daily connection)?
What	• What **specific aspects** of the temple experience are we digitizing (e.g., live streaming, interactive services like rituals, donations, home prasad delivery)?
Where	• Where will this product live (e.g., mobile app for daily accessibility, a website platform, or an immersive AR/VR experience)?
When	• When do we expect **peak usage** and what is the **launch timeline** (e.g., optimizing for major festivals like Diwali, or focusing on consistent daily morning traffic)?
Why	• **Why** is our **specific company** building this now (e.g., to monetize spiritual services, increase engagement, or solve monetize for geographical barriers for devotees)?
How	• How will we **onboard the supply side** (e.g., partner with famous physical temples or create an entirely virtual, independent temple from scratch)?

Product Improvement – Improve Number of Rides per User for Uber

Framework	Clarifying Questions
Who	• Who is the **target user segment** we want to focus on: daily **office commuters**, weekend **socializers, students**, or **airport-transfer** users?
What	• What defines a **ride** and our **baseline**, and are we focusing on **all categories** (UberGo, Premium, Auto, Moto) or targeting a **specific tier** (e.g., UberPool) to drive frequency?
Where	• Where are we trying to **move this metric**; • is this a **global mandate**, or focused on a **specific geography** (e.g., high-traffic Metro cities vs. low-adoption Tier 2 cities)?
When	• **When** is **user frequency currently dropping**; • Are users taking morning rides but switching to **competitors/public transit** in evenings, or abandoning the app during **high-surge peak hours**?
Why	• **Why** is this a **priority right now**; • Are we losing **market share** (to Ola/Rapido), trying to increase **overall revenue**, or aiming to improve **driver utilization** by generating demand?
How	• **How** much of an **increase** are we aiming for, and in what **timeframe** • (e.g., Are we looking to increase average rides from 2/week to 3/week over the next quarter?)
