Education

- **BITS Pilani, KK Birla Goa Campus** — Goa, India
  B.E. – Electrical and Electronics Engineering — 2023–2027
- **Class XII — 95.1%** | *Sri Medha Junior College* — Hyderabad, India — 2021–2023
- **Class X — 93.6%** | *Vikas The Concept School* — Hyderabad, India — 2014–2021

Professional Experience

- **Product & AI Automation Intern** — Indore, India
  CUBE Technologies — *Jul 2026 – Dec 2026*

  B2B SaaS platform (BIM, CDE, PMIS) for large-scale infrastructure and construction projects, with 70k+ users.
  - Built an **automated CRM pipeline** (Freshsales API, GitHub Actions) reporting 8 sales reps' calls, meetings and deals to the Director daily/weekly, replacing unverified standups and cutting **∼20 min of status questions** per review.
  - Mapped a 4-stage sign-up funnel (Requested → Active → Paid → Won) across **84 trial and paid portals** joined to **74 live CRM deals**; found trials activate at **94%** but only **6% convert**, with **64% of self-serve sign-ups** never reaching sales. Wrote a **PRD with RICE-ranked fixes and a clickable prototype**.
  - Built an **AI workflow** that converts call recordings into Notion notes and a branded follow-up deck, reviewed in a manual accuracy check before sending, **cutting assembly time by >70%**.
  - Prototyped a **self-hosted tool (Apollo via Model Context Protocol, web scrapers)** that returns an Excel file of matching contacts from a company and designation, replacing manual lookups.

- **Program Strategy and Operations Intern** — Hyderabad, India
  GMR Varalakshmi Foundation — *Jun 2025 – Aug 2025*

  Foundation-run skilling program for 120+ learners across 5 villages.
  - Built a **7-metric retention dashboard** (activation, drop-off) for **120+ learners**, with findings that triggered a **15% budget reallocation** to the highest-churn cohort.
  - Mapped the funnel across 5 villages to find **3 drop-off stages** and tested **2 reactivation hypotheses** on **25–30 dormant users**, **lifting funnel conversion by 25%**.

Projects

- **SwasthyaSaathi – GenAI Vernacular Triage Assistant** — *Live prototype — GenAI — Jul 2026*
  - Shipped a live Hindi and Marathi triage prototype (Describe, Triage, Route, Act) targeting India's **62% out-of-pocket health spend** and **80% rural specialist shortfall**.
  - Defined a **North Star of correctly routed consultations per week** with a red-flag-miss guardrail and a **safety gate that bypasses the large language model (LLM)**, plus a WhatsApp-first go-to-market and commission model.
- **AI Try-On for an Online Jewellery App – PRD** — *PRD — Computer vision — Jul 2026*
  - Wrote a PRD for augmented reality (AR) try-on of high-value jewellery with 3 personas, pain-point to feature mapping, **6 failure-state flows** and Digital Personal Data Protection (DPDP) Act consent rules for biometric face data.
  - Scoped the minimum viable product (MVP) to **necklaces on the top 50 stock-keeping units (SKUs)** to contain the 3D-asset bottleneck, set a North Star of **25% of product detail page (PDP) sessions using Try-On**, and planned a one-week 10% soft launch before scaling to all traffic.
- **Product Teardown – Microsoft Link to Windows** — *Product analysis — Jun 2026*
  - Ranked features by context-switch saved (sync, clipboard and mirroring, file sharing) to frame phone-PC switching as a **stickiness problem** for knowledge workers and students.
  - Proposed **phone pickup rate** as the headline metric with **Day-30 (D30) retention** and cross-product usage, flagging setup friction, original equipment manufacturer (OEM) fragmentation and no WhatsApp continuity in India.
- **E-Commerce Product Analytics** — *SQL — Funnel and cohort analysis*
  - Needed to know which buyers drive repeat purchase; ran SQL funnel and cohort analysis on **50K+** transactions to segment high-intent buyers and built a KPI model for AOV, repeat purchase and revenue distribution.
  - Revenue looked concentrated; tested a power-law hypothesis and found the top **10%** of buyers drove **42%** of revenue and over-indexed on mobile checkout, so recommended prioritising mobile UX for high-LTV users.

Skills & Certifications

- **Product (PM Fellowship, DoraemonDen):** Prioritisation (RICE), GTM, Personas & User Journeys, Metrics & North Star, Guesstimates, Root Cause Analysis, Product Design & Wireframing, PRDs, A/B Testing, Jira
- **AI & Data:** Claude & LLM Workflows, MCP, SQL, Python, Advanced Excel, REST APIs, GitHub Actions
- **Certifications:** SQL for Data Analytics (Udemy); Python Fundamentals (DataCamp); Excel for Business (Coursera)

Positions of Responsibility

- **Organiser – BITSMUN Department** — *BITS Pilani, Goa*
  - Built a contact database through data mining and cold-called international students to invite them to BITSMUN.
